THE MONTHLY MESSAGE

This month, we cover Dark-Web Monitoring:
DO YOU KNOW WHAT'S LURKING IN
THE DARK WEB?

DID YOU KNOW?

- 99% of businesses aren't protected from cyber threats
- 85% of businesses with 1-1000 employees have already been BREACHED but don't know it yet
- The Dark Web is 550 times bigger than the surface/searchable web and growing
- Once infiltrated, your confidential information is bought and sold on the Dark Web.

WHAT IS THE DARK WEB?

The cybercrime landscape is evolving fast . Cybercriminals are smarter and more organized now, almost functioning like professionals. The parallel universe where they operate in a corporate-like manner is called the Dark Web.

THE INTERNET CAN BE CATEGORIZED INTO 3 PARTS:

1. SURFACE WEB - 'regular' websites--show on web searches.
2. DEEP WEB - shows in web searches, log in to view content.
3. DARK WEB - Isn't visible to search engines and requires use of an anonymizing browser to be accessed. Typically hosts illicit content like: Credit card details, stolen logins, accounts like Netflix, contact details/platform for striking deals.

Whether it's in the office or out in the community, you can catch us with our masks ON!

Moving into our new building and seeing all our growth!

What Do You Like Doing In Your Spare Time?
Playing Golf and Working on My Truck

We work to provide clients with the right tools and people to support their Technology. From a growing business to a multi-site enterprise, as your Managed IT Partner we are with you every step of the way.

(Continued from Page 1)

WHAT CAN YOU DO?

DARK WEB MONITORING SERVICES

A company may help you:

Information monitoring - Keep an eye out for any information you specify or that is related to you that may be present or traded on the dark web.

Vulnerability alerts - Entities are willing to give away information about vulnerabilities in certain systems/ software for a price. We watch for such information and alert customers of such threats.

Provide suggestions - Offer industry insights, trends and benchmarks to help you tighten cybersecurity.

SAFEGUARDING YOUR DATA

Things you can do to keep your data safe:

Password Hygiene
Follow industry best practices. Establish policies and rules for password sharing.

Train your Staff
Train staff to identify spam, phishing, and other malware traps. Conduct tests and mock drills and re-train those who don't pass them. Provide updates on new threats.

BYOD Policies
Establish a clear BYOD framework that will help you manage the risks associated with this setup.

Access Permissions and Roles
Establish user roles for staff and give role-based data editing, copying or sharing permissions so employees only have as much access as they need.

WHAT'S NEW WITH PANTHEON?

Congrats to Office Manager/Sales Coordinator Nikki Dulas on graduating with her Bachelor's in Business Management from Rasmussen College!

We are so proud of you and thankful for all you do!

We welcomed 2020 grad Ella Wiebusch to the team as our Marketing Specialist!

We're excited to see what Ella will do as she puts her creativity to work for all our marketing campaigns!
